Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-23, drawn to a light transmitting filter, classified in class 359, subclass 614.
- II. Claims 24-33, drawn to method of making a light transmitting filter, classified in class 427, subclass 162.
- III. Claims 34-44, drawn to specific features of making a light transmitting filter by laminating the second surface of the first transparent film to the second surface of the second transparent film so that the microstructures of the first transparent film are optically aligned with the microstructures of the second transparent film, classified in class 428, subclass 551.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process.

Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2)

Art Unit: 2872

that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process.

Inventions II and III are related as combination and subcombination. Inventions

in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination as claimed does not require the particulars of the subcombination as claimed such as. The subcombination has separate utility such as laminating the second surface of the first transparent film to the second surface of the second transparent film so that the microstructures of the first transparent film are optically aligned with the microstructures of the second transparent film.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, III, restriction for examination purposes as indicated is proper.

A telephone call was made to Heidi Boehlefeld on 8/17/04 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
